

- 1) (currently amended) A storage system, related to storing at least one roll of material and to dispensing material from at least one selected such at least one roll of material, comprising:
 - a) container means for containing the at least one roll of material;
 - b) material dispensing means for dispensing material from the at least one selected roll of material;
 - c) wherein said container means comprises
 - i) storage holding means for removably holding the at least one roll of material, and
 - ii) dispensing holding means for removably holding the at least one selected roll adjacent said first material dispensing means;
 - d) wherein said storage holding means and said dispensing holding means consist essentially of one unitary piece;
 - e) wherein said dispensing holding means comprises cradling means for cradling the at least one selected roll adjacent said first material dispensing means;
 - f) wherein said at least one container has a width greater than 20 inches.
- 2) (currently amended) A storage system, related to storing at least one roll of material and to dispensing material from at least one selected such at least one roll of material, comprising:
 - a) at least one container to contain the at least one roll of material;
 - b) at least one material dispenser to dispense material from the at least one selected roll of material;
 - c) wherein said at least one container comprises
 - i) at least one storage holder to removably hold the at least one roll of material, and
 - ii) at least one dispensing holder adapted to removably hold the at least one selected roll adjacent said at least one first material dispenser;
 - d) wherein said at least one storage holder and said dispensing holder consist essentially of one unitary piece;
 - e) wherein said at least one dispensing holder comprises at least one cradle;
 - f) wherein said at least one cradle is structured and arranged to support the at least one selected roll adjacent said at least one first material dispenser;
 - g) wherein said at least one container has a width greater than 20 inches.
- 3) (currently amended) The storage system according to Claim 2 wherein said at least one storage holder and said at least one dispensing holder consist essentially of one unitary monolithic piece of molded plastic.
- 4) (original) The storage system according to Claim 2 wherein said at least one container comprises at least one cover adapted to allow stacking at least one storage system on top of said at least one cover.
- 5) (original) The storage system according to Claim 2 wherein said at least one container further comprises at least one separator to separate the at least one dispensing holder from the at least one storage holder.
- 6) (original) The storage system according to Claim 2 wherein said at least one material dispenser comprises at least one cutting guide to guide cutting dispensed material from the at least one selected roll.

- 7) (original) The storage system according to Claim 2 wherein said at least one storage holder further comprises at least one accessory holder adapted to hold at least one roll of ribbon.
- 8) (currently amended) The storage system according to Claim 7 wherein A storage system, related to storing at least one roll of material and to dispensing material from at least one selected such at least one roll of material, comprising:
- a) at least one container to contain the at least one roll of material;
 - b) at least one material dispenser to dispense material from the at least one selected roll of material;
 - c) wherein said at least one container comprises
 - i) at least one storage holder to removably hold the at least one roll of material, and
 - ii) at least one dispensing holder adapted to removably hold the at least one selected roll adjacent said at least one first material dispenser;
 - d) wherein said at least one storage holder and said dispensing holder consist essentially of one unitary piece;
 - e) wherein said at least one storage holder further comprises at least one accessory holder adapted to hold at least one roll of ribbon;
 - f) wherein said at least one accessory holder comprises at least one ribbon dispenser to dispense ribbon from such at least one roll of ribbon, and
 - g) wherein said at least one ribbon dispenser comprises at least one slot through which ribbon may be dispensed while such at least one roll of ribbon remains within said at least one container.
- 9) (currently amended) The storage system according to Claim 2 wherein said at least one material dispenser comprises at least one slot formed by at least one gap between said at least one storage holder and said at least one cover.
- 10) (original) The storage system according to Claim 2 further comprising the at least one roll of material.
- 11) (currently amended) The storage system according to Claim 6 A storage system, related to storing at least one roll of material and to dispensing material from at least one selected such at least one roll of material, comprising:
- a) at least one container to contain the at least one roll of material;
 - b) at least one material dispenser to dispense material from the at least one selected roll of material;
 - c) wherein said at least one container comprises
 - i) at least one storage holder to removably hold the at least one roll of material, and
 - ii) at least one dispensing holder adapted to removably hold the at least one selected roll adjacent said at least one first material dispenser;
 - d) wherein said at least one storage holder and said dispensing holder consist essentially of one unitary piece;
 - e) wherein said at least one material dispenser comprises at least one cutting guide to guide cutting dispensed material from the at least one selected roll;
 - f) wherein said at least one cutting guide comprises at least one groove.

- 12) (currently amended) The storage system according to Claim 6 wherein said at least one storage holder, said at least one dispensing holder, and said at least one cutting guide consist essentially of one unitary monolithic piece.
- 13) (original) The storage system according to Claim 7 wherein said at least one storage holder, said at least one dispensing holder, and said at least one accessory holder consist essentially of one unitary piece.
- 14) (original) The storage system according to Claim 10 wherein said at least one roll of material comprise wrapping paper.
- 15) (original) The storage system according to Claim 9 wherein said at least one material dispenser comprises at least one cutting guide to guide cutting dispensed material from the at least one selected roll.
- 16) (original) The storage system according to Claim 15 wherein
 - a) said at least one storage holder further comprises at least one accessory holder adapted to hold at least one roll of ribbon.
 - b) said at least one storage holder, said at least one dispensing holder, said at least one accessory holder, and said at least one cutting guide consist essentially of one unitary piece of molded plastic.
- 17-20) (canceled)
- 21) (new) The storage system according to Claim 2 wherein said at least one cradle is structured and arranged to support the at least one selected roll adjacent said at least one first material dispenser without inserting anything into the at least one selected roll.
- 22) (new) The storage system according to Claim 2 wherein said at least one cradle is structured and arranged to cradle the at least one selected roll peripherally rather than axially.
- 23) (new) The storage system according to Claim 2 wherein said at least one storage holder and said at least one dispensing holder are substantially translucent.
- 24) (new) The storage system according to Claim 2 wherein
 - a) said storage system consists essentially of two pieces;
 - b) wherein said two pieces consist essentially of a monolithic bottom portion piece and a monolithic cover piece.
- 25) (new) The storage system according to Claim 2 wherein said at least one container has a width greater than 25 inches.
- 26) (new) The storage system according to Claim 2 wherein said at least one container has a width between about 32 inches and about 50 inches.
